Attachment A East Bay Municipal Utility District Pardee Center Sandretto Road New Culvert Installation

Overview and Background

Sandretto Road provides access from Calaveras County to East Bay Municipal Utility District's (EBMUD) Pardee Center Campus (Pardee), headquarters for its remote operations. EBMUD proposes to install a new culvert (Project) on an identified section of Sandretto Road that is prone to flooding during intense wet weather events.

Project Purpose and Objective

The Project's objective is to convey stormwater runoff from the neighboring hillside to the respective downstream drainage, preventing flooding in the identified section of Sandretto Road. Then flooding can potentially limit access to Pardee from Calaveras County, in addition to creating a safety hazard for Pardee staff and local motorists. The Project will ensure access to Pardee is secured, while also improving road conditions during wet weather events.

Project Location

The proposed Project will be conducted on Sandretto Road, coordinates 38.23632, -120.83958, about a half mile southeast of Pardee, see attached aerial maps. The Project site consists of the existing roadway and road shoulder bordered by riprap and annual non-native grassland, see attached Project location photos.

Project Characteristics

The Project includes the installation of a 24-inch High-Density-Polyethylene pipeline, with placement of riprap armoring around the culvert outlet to prevent erosion. The Project was designed to ensure the least impact to the environment.

Required heavy equipment includes a backhoe and dump truck, in addition to an asphalt saw and hand shovels. Staging area will be established at Pardee, near its covered equipment parking area.

Permits and Approvals

EBMUD has submitted a Standard Agreement Notification with the California Department of Fish and Wildlife (CDFW).

Attachment A East Bay Municipal Utility District Pardee Center Sandretto Road New Culvert Installation

Schedule and Work Hours

The Project's activities will be limited to weekdays with standard business hours of 7:00 a.m.to 4:00 p.m. The Project should take approximately four days to complete.

EBMUD Practices and Procedures

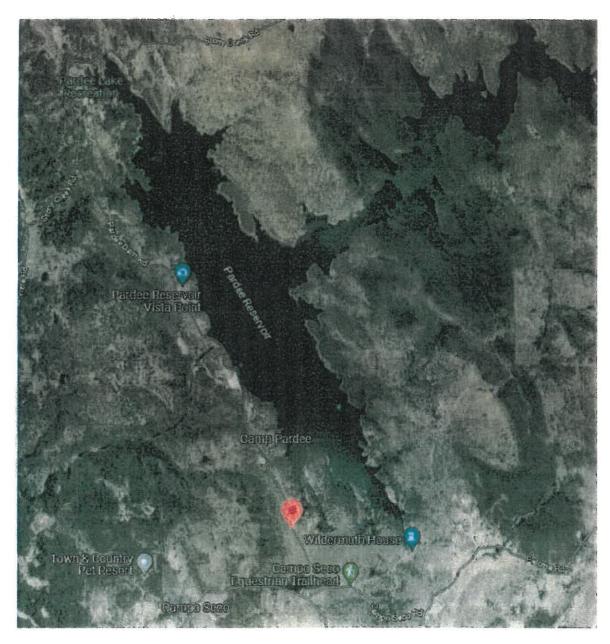

Standard construction environmental and safety practices applicable to all EBMUD construction projects will be incorporated into the Project.

EBMUD Standard Biological Best Management Practices will be implemented for all Project activities. Biological support will be provided by a CDFW-approved Biologist, including preconstruction survey, worker site-specific training, and biological monitoring for the Project activities.

Exemption Findings

EBMUD has determined that the Project is exempt from CEQA under the CEQA Categorical Exemptions Guidelines Sections 15301 and 15304 as the Project will be conducted within an existing structure, a previously disturbed area, and the culvert installation is a minor alteration to the roadway.
