

# **Nutrients Update**

Board Workshop

November 22, 2016

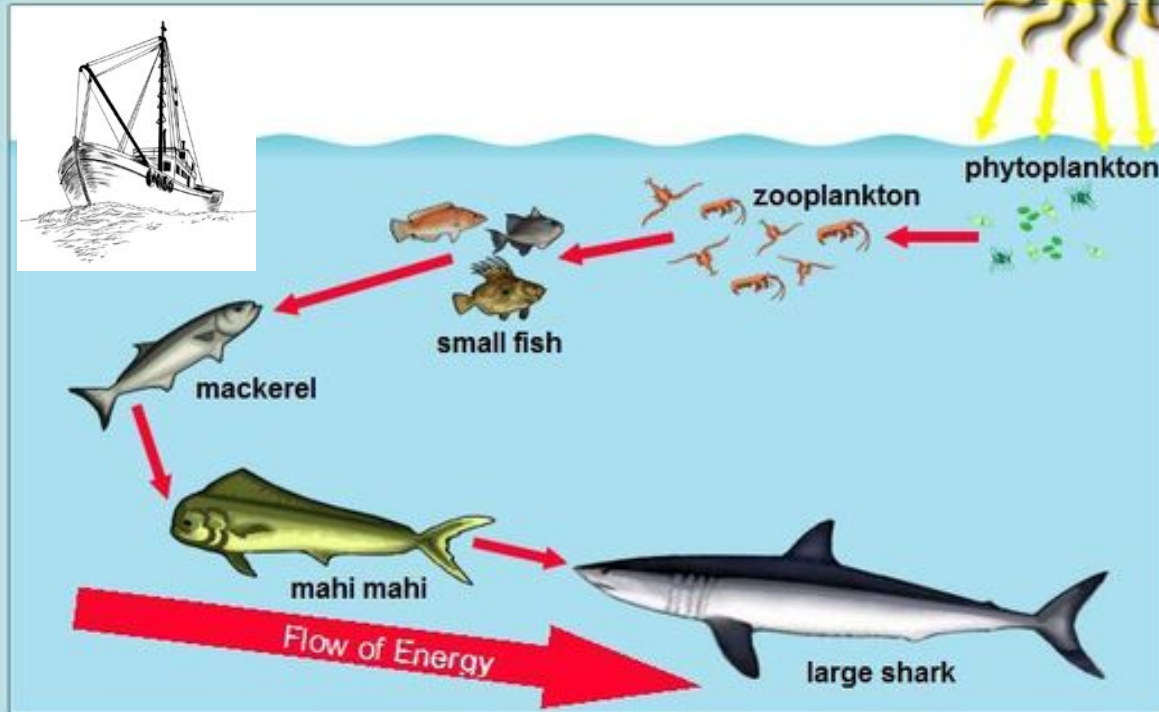

# Outline

- **Growing concerns of nutrient pollution**
- **Possible requirements in 2019 nutrient permit renewal**
- **District nutrient work plan**
- **Summary and next step**

# What are Nutrients?

Nutrients (nitrogen and phosphorus) are an essential part of aquatic ecosystems.

Nutrients (N+P)

Nitrogen and phosphorus support the growth of algae and aquatic plants, which provide food and habitat for aquatic animals.

# Why Concern on Nutrient Pollution?

Excess nutrients — Too much of a good thing

# Recent Local and National Nutrient Problems

CBSNEWS

Video US World Politics Entertainment Health MoneyWa

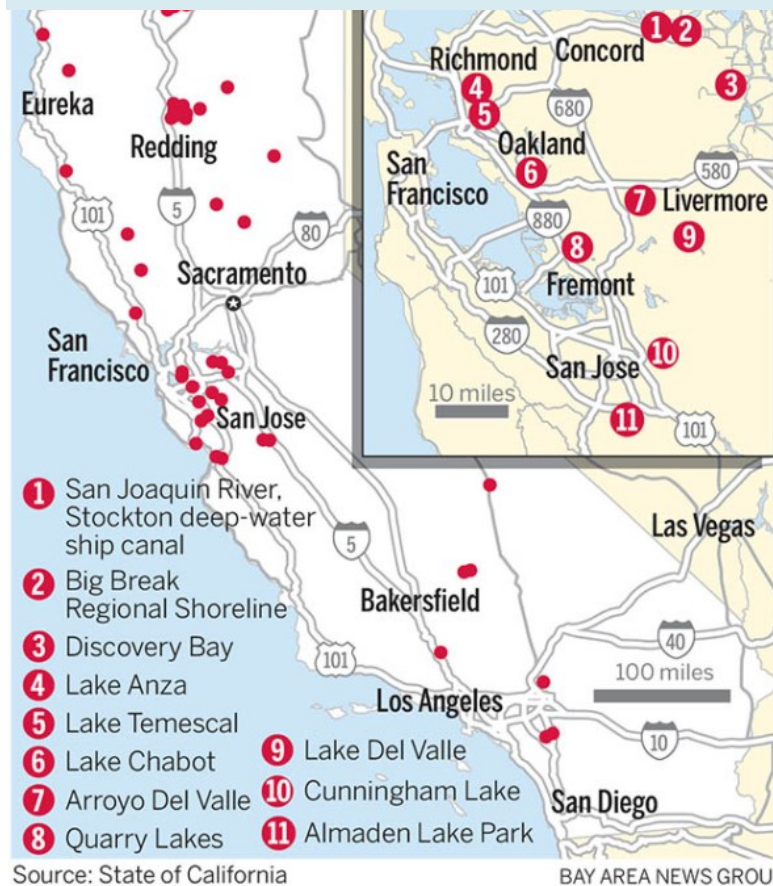

AP / November 6, 2015, 12:53 PM

## High toxin levels delay California crab season

Serious algae outbreaks have hit more than 20 states this summer

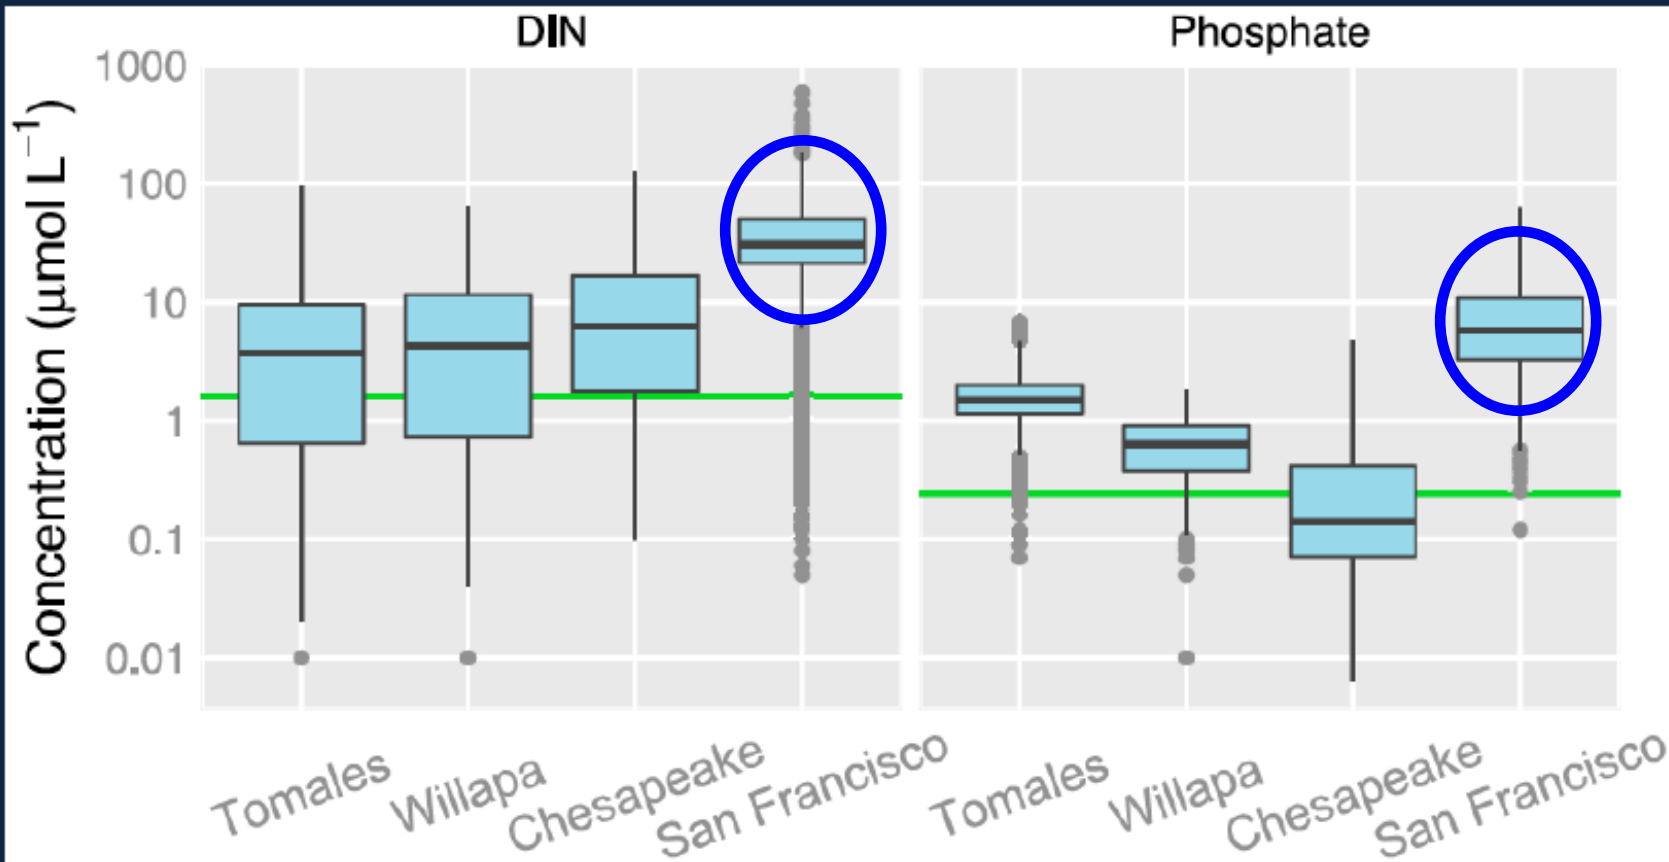

More than 40 CA lakes and waterways have suffered toxic blue-green algae blooms

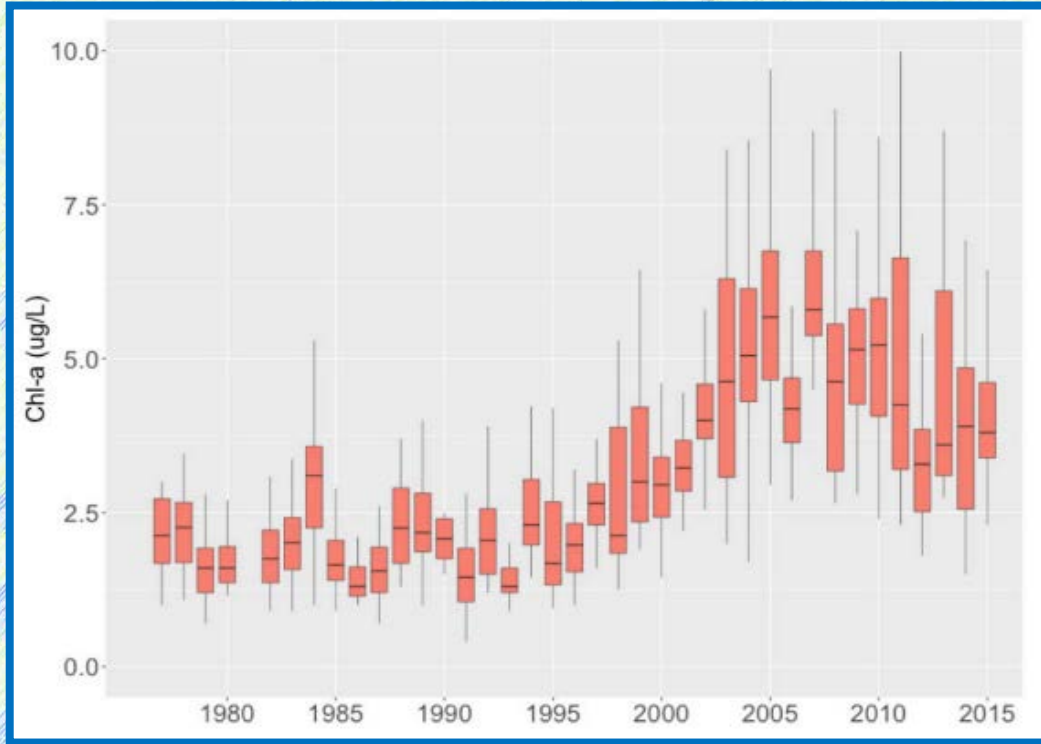

# SF Bay Nutrient Concern: Nutrient Enriched

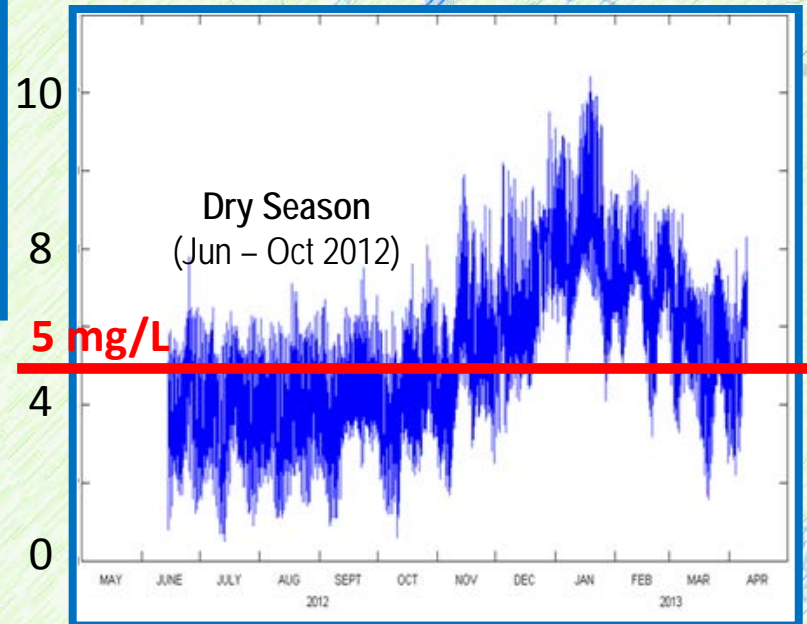

## San Francisco Bay -- High N and P Concentrations

# SF Bay Nutrient Concern: Early Signs of Possible Nutrient Impact

Low Dissolved Oxygen  
in Sloughs and Creeks

Increased Fall Phytoplankton Biomass  
in South Bay

# SF Bay Nutrient Concern: Algal Toxins

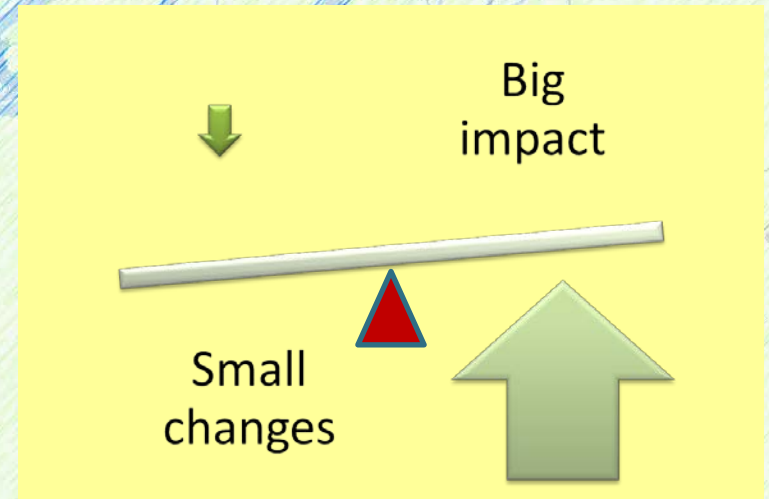

- Low levels of algal toxins detected Bay-wide
- One toxin (microcystins) has at times exceeded the fish consumption guideline

# Growing SF Bay Nutrient Concerns

- **Is the Bay currently impaired by nutrients?**
- **Is there a tipping point?**
- **What management actions, if any, are needed?**

# Possible Requirements of 2019 Permit Renewal

10+ Years (Initiated 2012)

**Scientific Studies**

Data Review, Monitoring, Special Studies, Modeling

Multiple Permits to Come

**Regulatory Approach**

2019

2024

2029

5-yr Watershed Permit (effective 2014)

- Nutrient discharge monitoring
- Plant optimization and upgrade studies
- Support for Scientific Studies

- Continue monitoring and funding of Scientific Studies?
- Nutrient mass limit (or a Load Cap)?

# District's WWTP—A Significant Nutrient Discharger

## Bay-wide nutrient sources:

- **65% POTWs**  
(of which approximately 20% is by EBMUD)
- **20% Delta**
- **15% Stormwater**

# District's WWTP Effluent Impact to the Bay

- **Despite high loads, District benefits from discharge location**

**However,**

- **Emerging concerns of coastal impact**

Ongoing Water Quality Modeling by SFEI

# District Nutrient Work Plan

## Out-of-plant Options

Explore watershed-based solutions (such as trading)

Explore multi-benefit approach

Evaluate R2 load reduction

## Treatment Plant Options

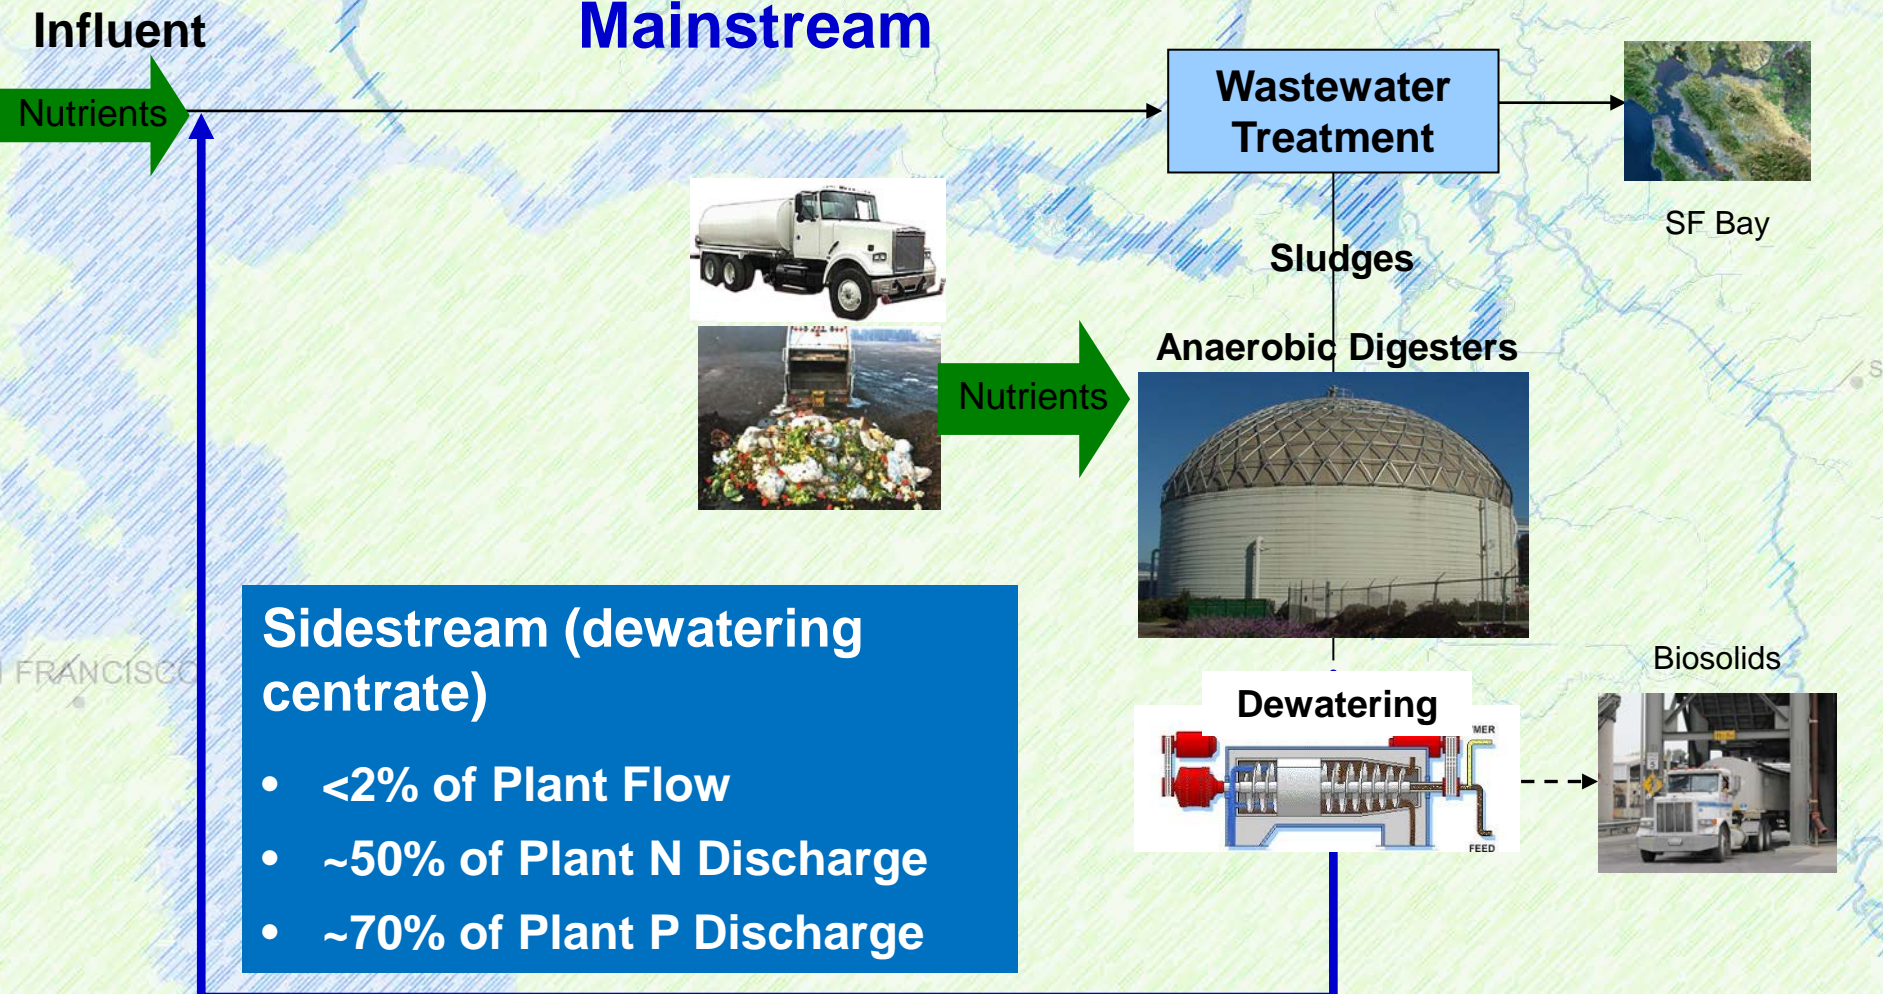

Evaluate sidestream treatment

Evaluate mainstream treatment

Select best option(s)

# Sidestream At District's WWTP

**Sidestream (dewatering centrate)**

- <2% of Plant Flow
- ~50% of Plant N Discharge
- ~70% of Plant P Discharge

# Where Sidestream Fits In

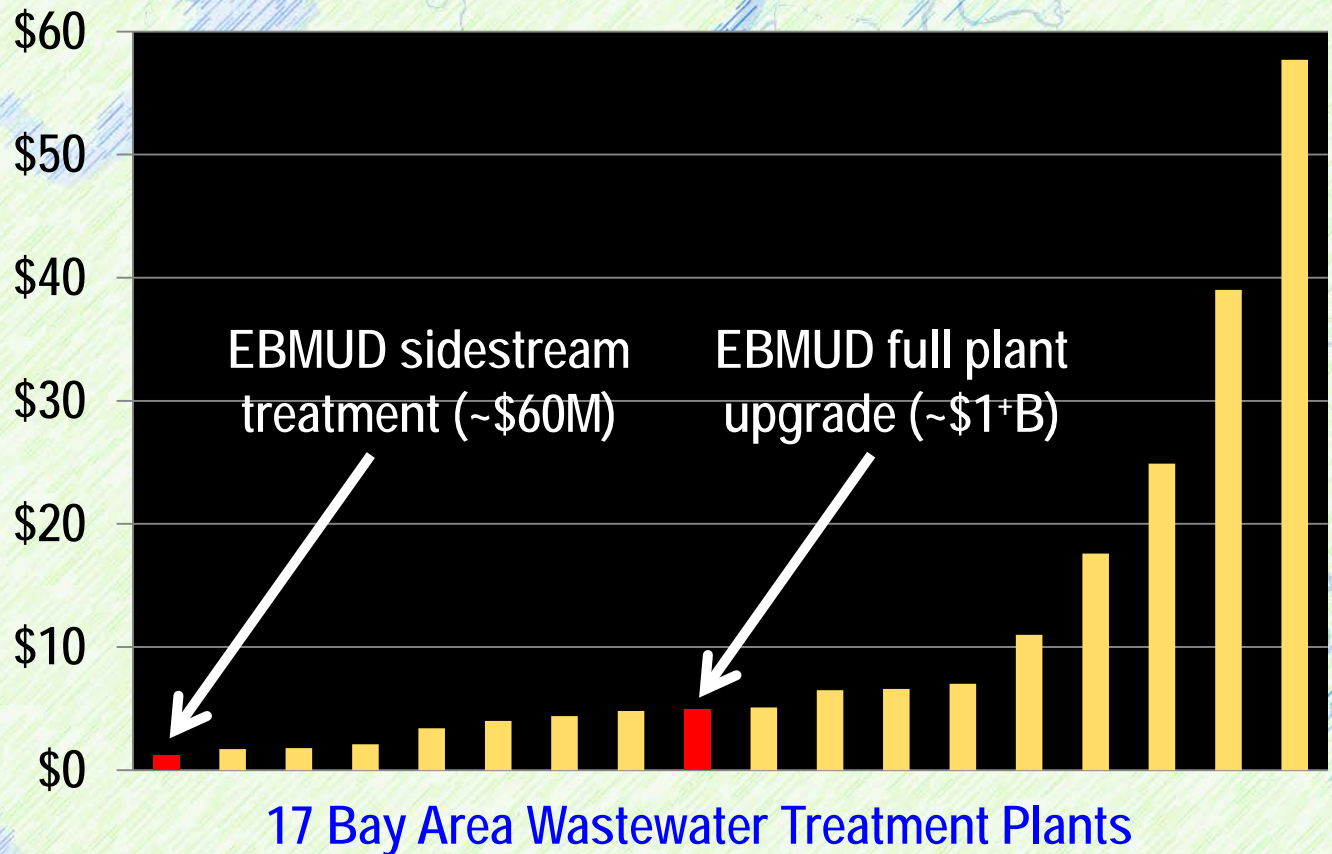

- **Sidestream treatment may be cost effective:**
    - **As part of an adaptive management stepwise approach**
- and/or**
- **In conjunction with a full facility upgrade**

# Preliminary Nutrient Removal Cost Comparison (Estimated under Watershed Permit Effort)

Preliminary Life-cycle Cost for Full Plant Nutrient Upgrades (\$/lb TN Removal)

Source: Preliminary Level 3 full plant upgrade costs for dry weather TN removal at 17 WWTPs. Costs are in present value.

# Explore Multi-benefit Opportunities

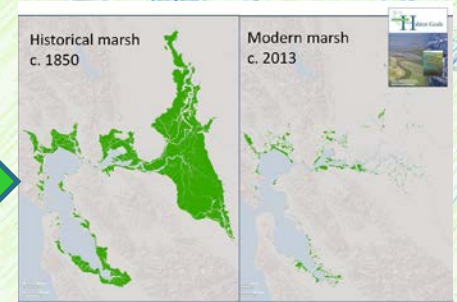

- Investigate recovering nutrients in sidestream for fertilizer market
- Explore use of nutrients in effluent for wetland restoration
- Evaluate nutrient upgrades and water recycling synergy

Use of Wastewater-derived Fertilizers

WWTP Effluent for Wetland Restoration

Various Uses of Recycled Water

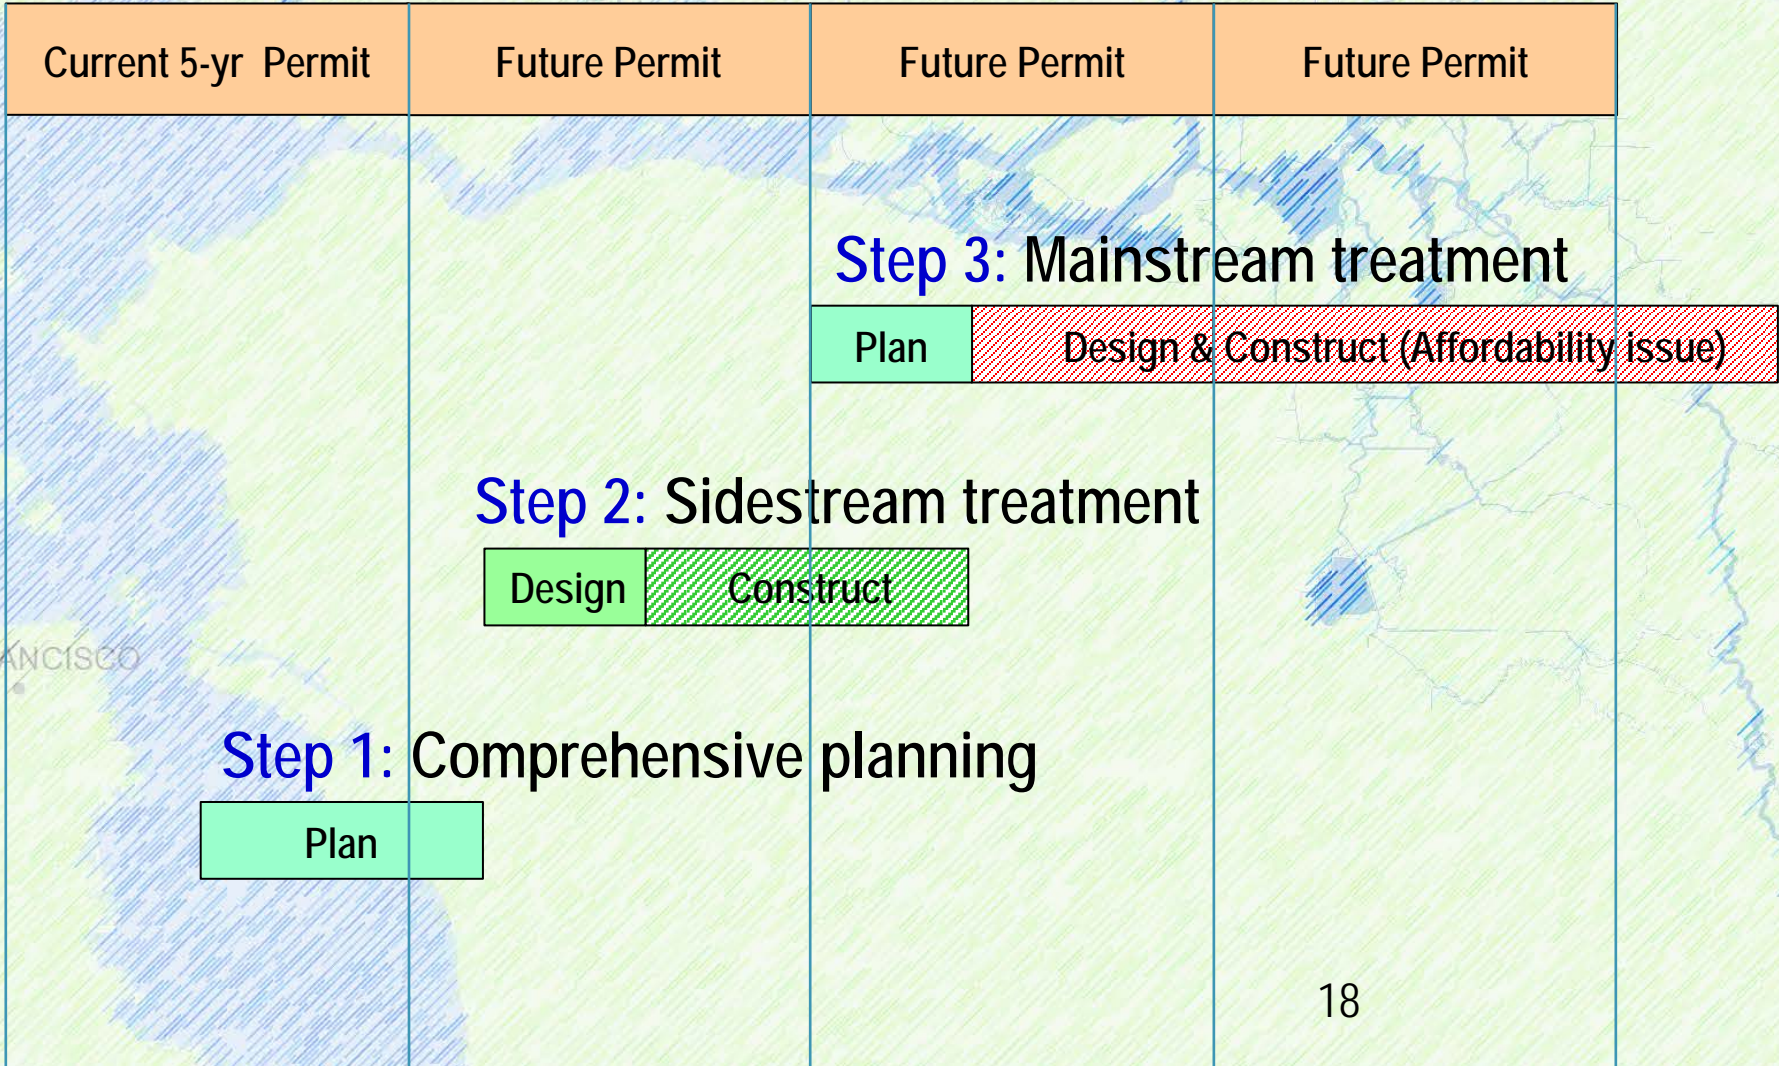

Additional treatment

# District Work Plan—Rough Timeline

2014                      2019                      2024                      2029                      2034

# Summary and Next Step

- **Nutrient discharge to the Bay is a growing regulatory/stakeholder concern**
- **Complex science—highly unlikely to provide complete answers ahead of regulatory actions**
- **Cost for nutrient upgrades will be significant (\$5–10 Billion for Bay Area WWTPs)**
- **Continue technical planning and regulatory strategy development**
  - **Explore strategies to leverage early action to reduce long-term risk to the District**

# **Food Waste Program Update**

Board Workshop

November 22, 2016

# Agenda

- Background
- Key Assumptions
- Food Waste Initiatives
  - City of Oakland/Waste Management
  - City of Berkeley
  - Recology/City of San Francisco
- Summary

# Background

- Negotiations with Harvest Power to design, build, and operate a large-scale food waste facility ended in April
- Staff has been working to develop alternative food waste pathways to support key initiatives
  - Continuing discussions with potential feedstock suppliers
  - Refining key financial assumptions and expanding understanding of market drivers
  - Developing food waste preprocessing alternatives and associated costs

# Background

# Dynamic Project Environment

- Solid waste industry still developing strategies to comply with state legislation
  - Requirements to divert organics from landfills with key focus on food waste
  - Multiple contending paths—WWTPs, dry anaerobic digestion, composting
  - Over time, demand for processing options expected to drive higher tipping fees
- Volatile energy and environmental attribute markets
- Preprocessing technology is in early stages of development

# Background Challenges at Other Agencies

Agency	Status	Comments
Massachusetts WRA (Boston)	On Hold	Selected preprocessed food waste provider, but abandoned project due to community concerns
Chicago Metro	On Hold	Planned project to accept preprocessed food waste placed on hold due to concerns regarding securing feedstock
DC Water	On Hold	Despite strong organizational focus on sustainability, nearing decision not to proceed due to economic concerns
LA County	In Development	Ongoing pilot working from a technical standpoint, but continued negotiations on finances
New York City	In Development	Large-scale project driven by solid waste interest and revenue streams
Toronto	Operating	Successful project driven by strong government incentives and directives
Central Marin Sanitation	Operating	Relatively small project built on strong community partnership between WWTP and co-located solid waste transfer facility

# Background Third-Party Review

- Staff has engaged third-party experts to review key assumptions and findings
  - Review assumptions and cost estimates (AECOM)
  - Preprocessing technology evaluation (Black & Veatch)
  - Preprocessing technology and cost estimate (Anaergia)
  - CNG markets, policy, and pricing (Gladstein and Associates)

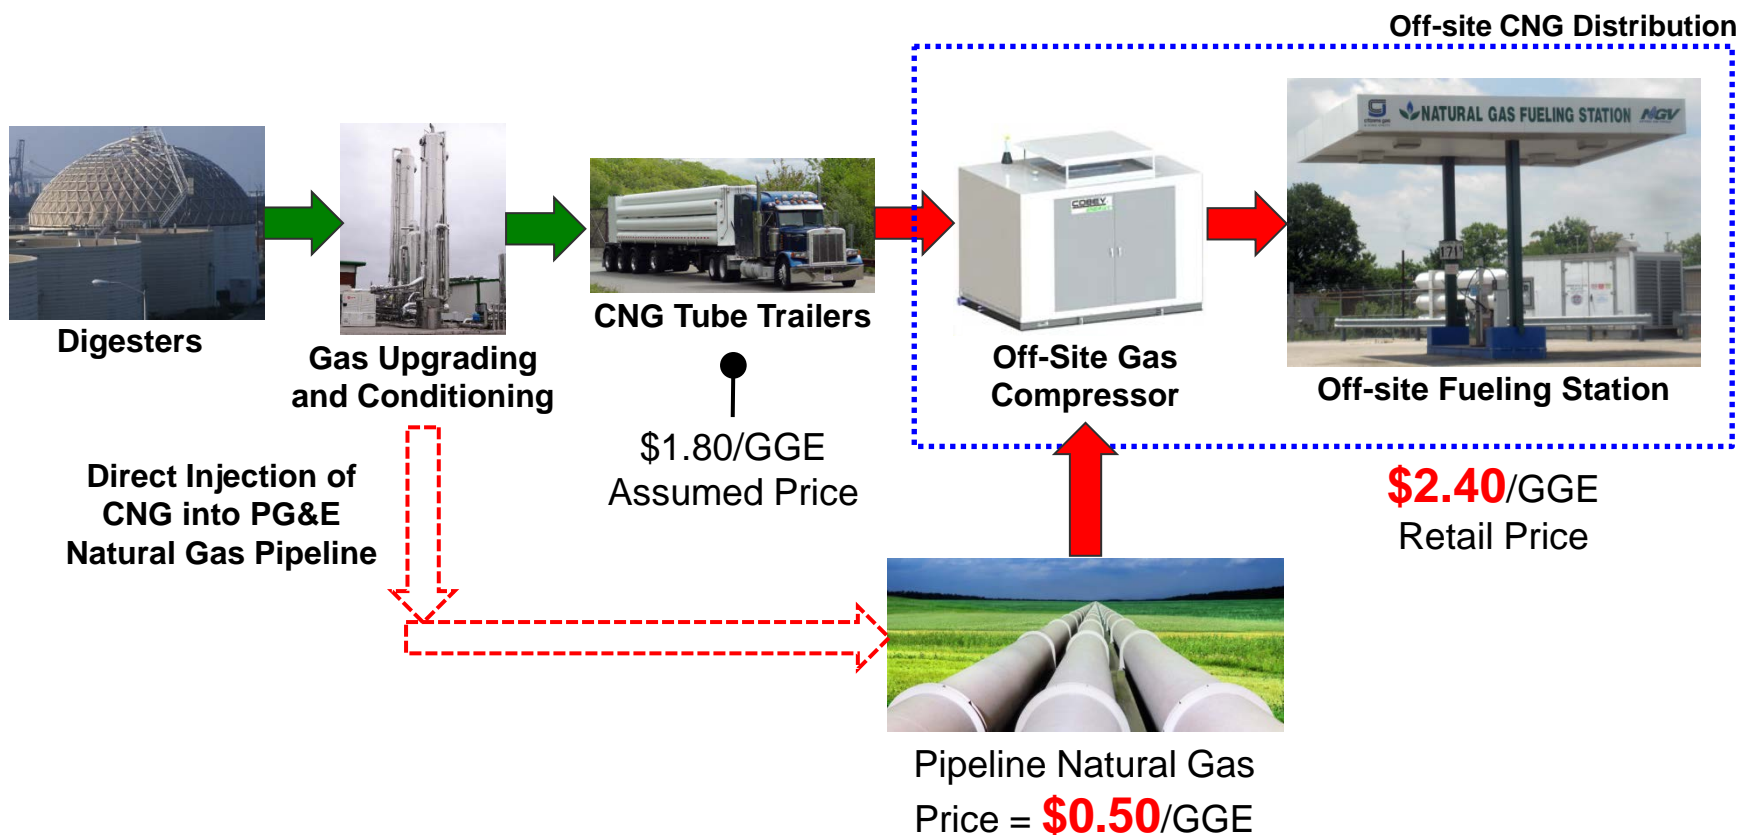

# Key Assumptions

## Significant Revision to CNG Price

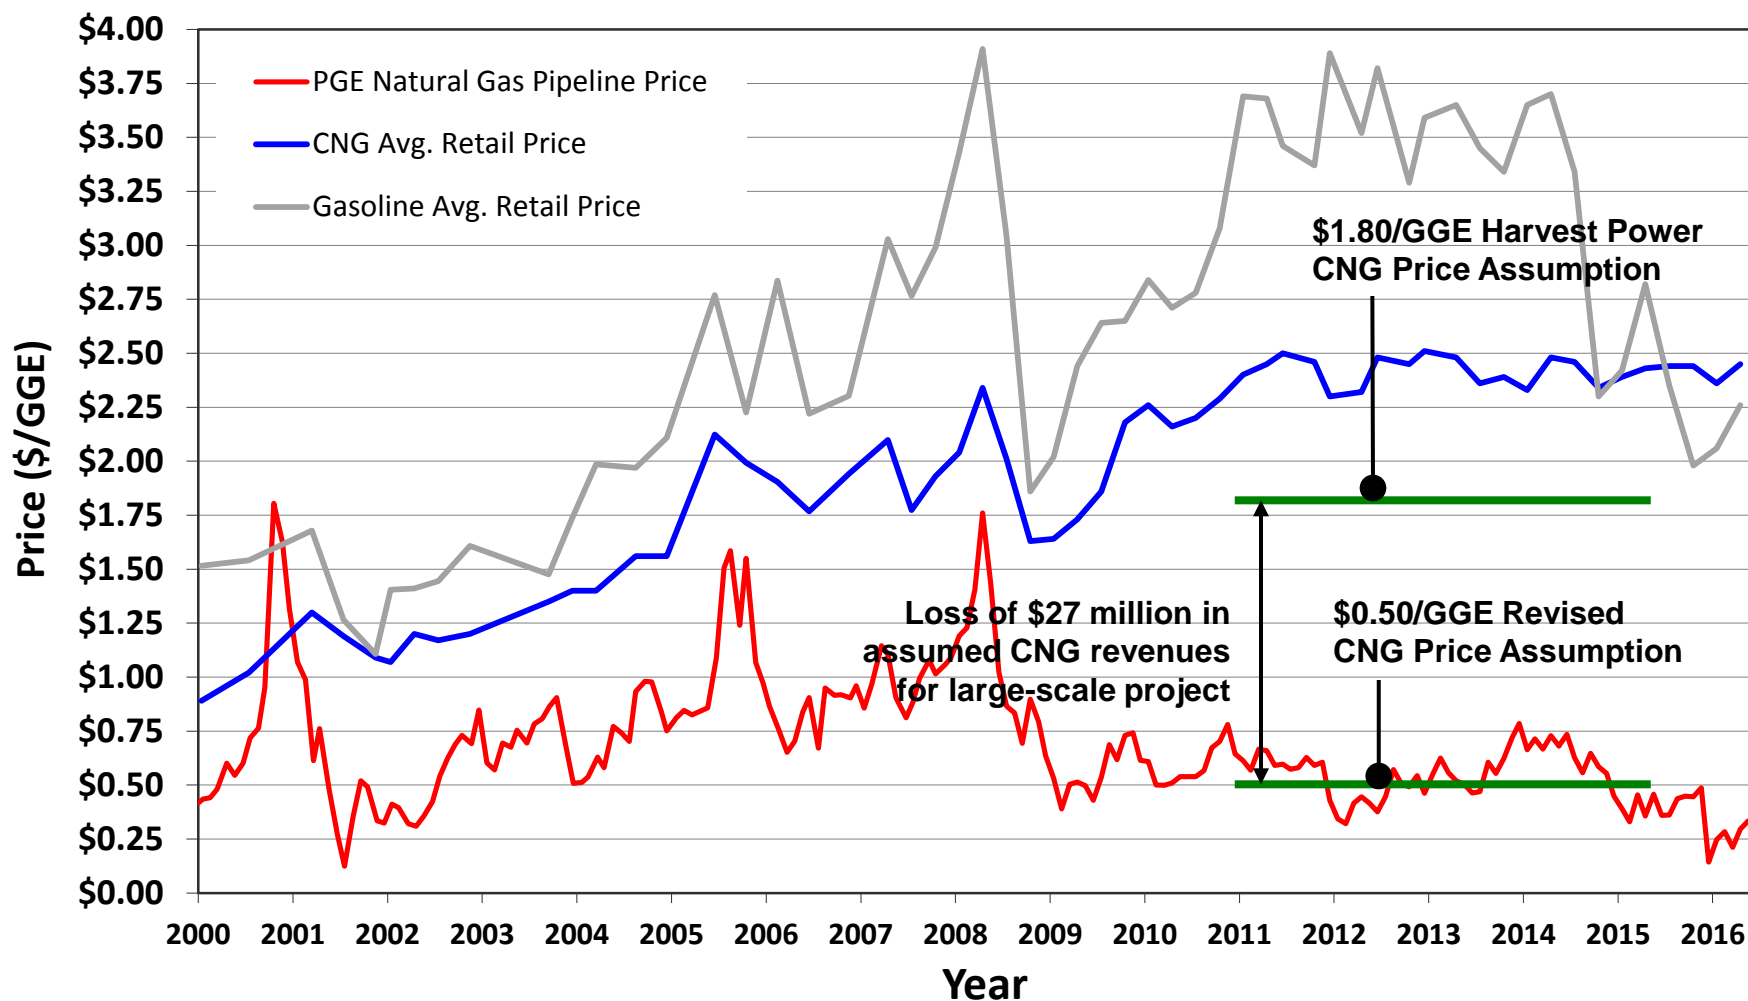

Harvest Power assumed price of **\$1.80** per gasoline gallon equivalent (GGE)  
- 25% discount on \$2.40/GGE retail price

# Key Assumptions CNG Price Trends

# Key Assumptions

## Digestate and Landfill ADC

- Stopwaste.org enacted an ordinance that prohibits landfilling of food scraps (Ordinance 2012-1)
  - Directly impacts use of co-digested residuals from receipt of Oakland or Berkeley food waste
- To accept Alameda County food waste, District would need to:
  - 1) Implement dedicated digestion and dewatering facility capital improvements (~\$12M) at the MWWTP,
  - 2) Divert all commingled biosolids from landfill ADC at an operating cost premium (\$1.5M/year), or
  - 3) Negotiate a short-term alternative approach with Stopwaste.org

# **Review of Food Waste Initiatives**

# Preprocessing Alternatives Development

## Key Considerations

- Capital Costs
  - New facilities and upgrades to existing MWWTP site/process
- Technology Approach and Risks
  - Emerging and unproven nature of technology
  - Material quality and associated preprocessing required
- Level of Service
  - Uptime and reliability requirements, associated penalties
- Facility Operation & Maintenance
  - Reject/recyclable material handling
  - Odors and permitting concerns
- Facility Size
  - Economies of scale vs. small-scale to manage risks

# Preprocessing Alternatives Development Large vs. Small Scale Facility

- Revised CNG price results in loss of significant revenue that is needed to offset initial capital cost
  - 200 tpd facility is estimated at \$60 million
  - ~\$28 million for biogas upgrading, dedicated digestion and dewatering, site and utility improvements
  - 25-year project net present value is estimated at more than \$35 million loss
- Shift focus to evaluate project feasibility of smaller scale facilities
  - Do not trigger large capital upgrades
  - Lower inherent project risk

# Preprocessing Alternatives Development

## Existing WWTP Capacity

- Key process bottleneck at MWWTP is solids dewatering capacity downstream of digesters
- Food waste processing at MWWTP increases hydraulic loading impacts on dewatering centrifuges
- Current dewatering capacity available for food waste equates to 60 tpd (as collected)
  - Material from Oakland, Berkeley, and Recology may cumulatively exceed this capacity

# Oakland Food Waste Initiative Preprocessing Alternatives

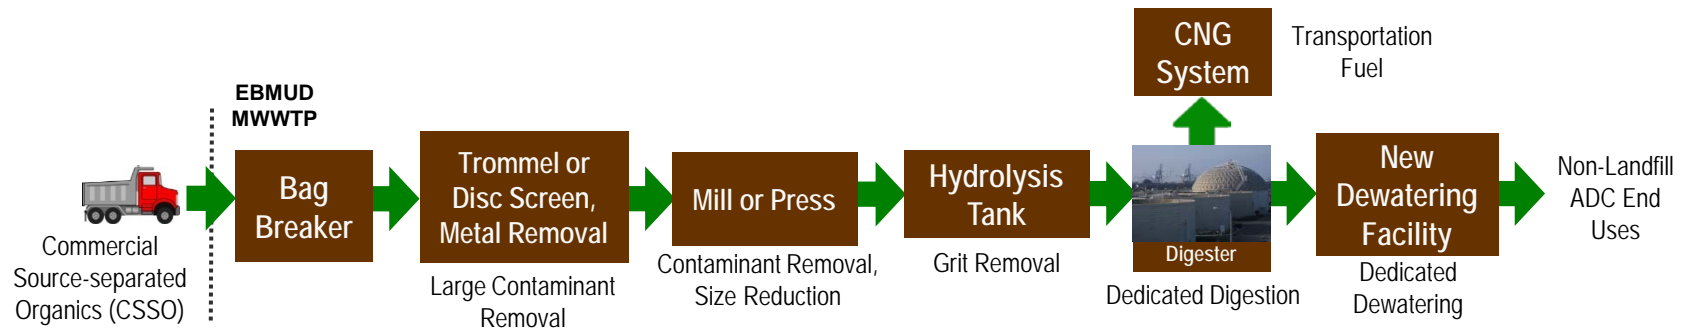

- ❶ Large-scale Facility at EBMUD (200 tpd)
- ❷ Medium-scale Facility at EBMUD (60 tpd)
- ❸ Pre-processing at Off-site Location (60 tpd)

# Oakland Preprocessing Alternatives

## ① Large Scale at EBMUD (200 tpd)

- Feedstock: Food waste from Oakland, Berkeley, others
- Robust processing train with increased likelihood of effectively addressing material quality issues
- Tip Fees: \$96/ton for Oakland
- Estimated capital cost = \$60 million

# ① Large Scale at EBMUD (200 tpd) Capital Cost Breakdown

Scope	Cost (\$M)
Preprocessing Building	19.7
Equalization/Hydrolysis Tank	3.7
Dedicated Digestion and Dewatering Building	12.3
CNG Production Facility	11.0
Odor Control System	7.6
MWWTP Site and Utility Improvements	5.7
<b>Total =</b>	<b>\$60M</b>

# Oakland Preprocessing Alternatives

## ② Medium Scale at EBMUD (60 tpd)

- As-collected Oakland food waste only (\$96/ton fee)
- Facility sizing avoids process upgrades (dewatering and CNG)
- Estimated capital cost = \$20 million

# ② Medium Scale at EBMUD (60 tpd) Capital Cost Breakdown

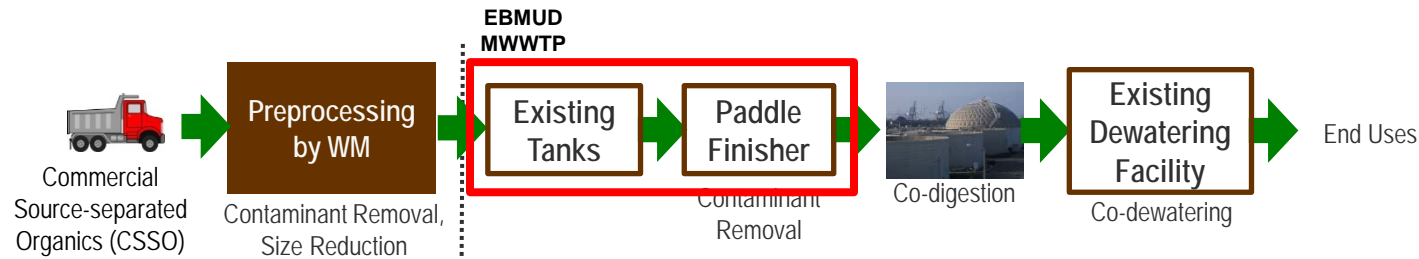

Scope	Cost (\$M)
Preprocessing Building (foundation, building, equipment, electrical and controls, and site improvements)	12.0
Odor Control System	6.5
MWWTP Site and Utility Improvements	1.5
<b>Total =</b>	<b>\$20M</b>

# Oakland Preprocessing Alternatives

## ③ Medium Scale, Off Site (60 tpd)

- Preprocessed food waste (\$46/ton fee)
- Assumes WM pays capital for transfer station upgrades
- Assumes material meets quality specification
- Existing facility capacity; no upgrades to gas handling or dewatering facility
- Small upgrades to existing processing train at MWWTP
- Estimated capital cost = \$1.5 - 4.0 million

# Oakland Preprocessing Alternatives Financial Analysis Summary

Description	Alt. 1 Large at EBMUD (200 tpd)	Alt. 2 Medium at EBMUD (60 tpd)	Alt. 3 Medium at WM (60 tpd)
<b>Capital Costs</b>			
<b>Total Capital Costs</b>	<b>-\$60.0M</b>	<b>-\$20.0M</b>	<b>-\$1.5M to -\$4.0M</b>
<b>Present Value of Gross Revenues</b>			
PV of Tip Fees	\$59.6	\$19.6	\$8.3
PV of Electricity Sales	\$0.0	\$2.8	\$2.7
PV of CNG sales	\$7.9	\$0.0	\$0.0
PV of LCFS	\$5.6	\$0.0	\$0.0
PV of RINs	\$10.3	\$0.0	\$0.0
<b>PV of Total Gross Revenue (20 years)</b>	<b>\$83.4M</b>	<b>\$22.4M</b>	<b>\$11.0M</b>
<b>Present Value of O&amp;M Costs</b>			
<b>PV of Total O&amp;M Costs (20 years)</b>	<b>-\$64.0M</b>	<b>-\$24.3M</b>	<b>-\$11.7M</b>
<b>Net Present Value (NPV)</b>			
<b>20-year NPV</b>	<b>-\$40.6M</b>	<b>-\$21.9M</b>	<b>-\$2.2M to -\$4.7M</b>

# Oakland Preprocessing Alternatives

## Key Findings/Next Steps

- ➊ Large-scale Facility at EBMUD (200 tpd)
    - Not financially feasible due to insufficient net revenues to payback high capital cost
  - ➋ Medium-scale Facility at EBMUD (60 tpd)
    - Although significantly lower in capital cost (\$20M vs. \$60M), does not appear financially viable
  - ➌ Medium-scale Facility at Off-site Location (60 tpd)
    - Preprocessing off site by WM is favorable relative to other alternatives
- Continue discussions with WM regarding a proposal for the District to accept preprocessed material

# Berkeley Food Waste Initiative

## Current Status

- Berkeley collects approximately 30 tpd of commercial food waste that is hauled to off-site composting facilities
- Berkeley recently issued an RFP for organics processing services for five years with two one-year extensions
- District submitted a proposal for anaerobic digestion of food waste
- Berkeley staff has consistently reported to City Council their intent to maintain an option to deliver food waste to the District

# Berkeley Food Waste Initiative Preprocessing Alternatives

- ❶ Full Preprocessing Facility at EBMUD (30 tpd)
  - Similar to Alternative 2 for Oakland food waste, but smaller
- ❷ Pilot Preprocessing Facility at EBMUD (20 tpd)
  - “Stripped down” approach to conduct demonstration test to evaluate preprocessing technologies

Both alternatives limit initial capital outlay by not requiring new RNG or dedicated dewatering facilities

# Berkeley Preprocessing Alternatives

## ① Full Preprocessing EBMUD (30 tpd)

- As-collected Berkeley food waste (30 tpd)
- Includes building enclosure and odor control
- Estimated capital cost = \$20 million

# Berkeley Preprocessing Alternatives

## ② Pilot Facility at EBMUD (20 tpd)

- As-collected Berkeley food waste (20 tpd)
- Test preprocessing equipment with limited capital investment (effectiveness, reliability challenges)
- No building or odor control system
- Estimated capital cost = \$6-8 million

# Berkeley Preprocessing Alternatives Financial Analysis Summary

Description	Berkeley		Oakland		Alt. 3 Medium at WM (60 tpd)
	Alt. 1 Full at EBMUD (30 tpd)	Alt. 2 Pilot at EBMUD (20 tpd)	Alt. 1 Large at EBMUD (200 tpd)	Alt. 2 Medium at EBMUD (60 tpd)	
<b>Capital Costs</b>					
Total Capital Costs	-\$20.0M	-\$6.0 to -\$8M	-\$60.0M	-\$20.0M	-\$1.5M to - \$4.0M
<b>Present Value of Gross Revenues</b>					
PV of Tip Fees	\$11.0	\$6.5	\$59.6	\$19.6	\$8.3
PV of Electricity Sales	\$1.4	\$0.8	\$0.0	\$2.8	\$2.7
PV of CNG sales	\$0.0	\$0.0	\$7.9	\$0.0	\$0.0
PV of LCFS	\$0.0	\$0.0	\$5.6	\$0.0	\$0.0
PV of RINs	\$0.0	\$0.0	\$10.3	\$0.0	\$0.0
<b>PV of Total Gross Revenue (20 years)</b>	<b>\$12.4M</b>	<b>\$7.3M</b>	<b>\$83.4M</b>	<b>\$22.4M</b>	<b>\$11.0M</b>
<b>Present Value of O&amp;M Costs</b>					
<b>PV of Total O&amp;M Costs (20 years)</b>	<b>-\$12.8M</b>	<b>-\$6.3M</b>	<b>-\$64.0M</b>	<b>-\$24.3M</b>	<b>-\$11.7M</b>
<b>Net Present Value (NPV)</b>					
<b>20-year NPV</b>	<b>-\$20.4M</b>	<b>N/A*</b>	<b>-\$40.6M</b>	<b>-\$21.9M</b>	<b>-\$2.2M to -\$4.7M</b>

\*Note: Pilot project will not generate sufficient revenues to consider payback analysis

# Berkeley Preprocessing Alternatives Summary

- ❶ Full Preprocessing Facility at EBMUD (30 tpd)
    - Does not appear to be economically viable
  - ❷ Pilot Preprocessing Facility at EBMUD (20 tpd)
    - Not designed for long-term operation or growth
    - Project approach has uncertain value
- Staff has initiated discussions with City of Berkeley regarding potential preprocessing capabilities at Berkeley transfer station

# Recology Urban Organics Initiative

## Current Status

- Conducting a pilot test since May to evaluate quality of preprocessed “urban organics” material from Recology
  - “Black bin” mixed materials (i.e., MSW minus recyclables)
  - Press technology installed at Recology in SF
  - Lower than expected throughput and yield
  - Equipment performance and reliability issues
  - Quality of material appears manageable
- Continue evaluation once preprocessing equipment issues are addressed

# Changing Marketplace

- Legislative initiatives continue to push material out of landfills (AB 1826 => SB 1383)
- High-level interest in supporting innovation in this area yet no integrated policy approach
  - National – Department of Energy, EPA
  - State – Water Board, Cal Recycle, Air Board
- Over time, the solid waste fee structure is expected to better support this direction to higher-use approaches
- Value of energy; both commodity price and environmental attributes may rise, over time, helping project economics

# Summary

- Oakland: Off-site preprocessing by WM may be financially viable
- Berkeley: Challenges in developing a financially feasible approach
- Recology: Continuing with the ongoing pilot evaluation
- Others
  - Interest from CCCSWA in expanding current program
  - Other haulers continue (e.g., Republic) continue to express interest
- Continuing to pursue federal and state agency support (e.g., grants) to improve overall project economics
- Advocate for increased policy support via environmental attributes, grants and other market incentives
